

Evaluation Rubric

Project: Prompt Engineering & AI Response Quality Comparison Study
Number of Tasks: 30
Total AI Responses: 60
Evaluation Scale: 1–5
Evaluator: ANJALI

1. Purpose of the Rubric

This rubric provides a standardized framework for comparing responses generated from **initial prompts** and **improved prompts**.

The purpose is to determine whether prompt improvements lead to measurable improvements in AI-generated response quality.

Each response will be evaluated using six criteria:

- 1. Relevance
- 2. Completeness
- 3. Clarity
- 4. Instruction Following
- 5. Specificity
- 6. Overall Quality

Each criterion receives a score from **1 to 5**.

The maximum score for one response is:

30 points

2. Evaluation Scale

Score	General Meaning
-------	-----------------

1	Very Poor
---	-----------

- | | |
|---|------------|
| 2 | Poor |
| 3 | Acceptable |
| 4 | Good |
| 5 | Excellent |

The evaluator should use the definitions below rather than assigning scores based only on personal preference.

3. Criterion 1 — Relevance

Definition

Measures whether the AI response directly addresses the task requested in the prompt.

Scoring Guide

Score	Description
1	Response is largely unrelated to the prompt.
2	Response contains some relevant information but frequently goes off-topic.
3	Response addresses the main topic but includes some unnecessary information.
4	Response is focused and mostly addresses the requested task.

- 5** Response directly and consistently addresses the requested task with little or no irrelevant information.

Example

Prompt:

Explain cloud computing to a beginner.

A response discussing cloud computing but spending most of its content on computer hardware would receive a lower relevance score.

4. Criterion 2 — Completeness

Definition

Measures whether the response adequately addresses the requirements of the prompt.

Scoring Guide

Score	Description
1	Major parts of the task are missing.
2	Several important requirements are missing.
3	Main task is addressed but some relevant information is missing.
4	Most requested information is included.
5	All important requirements are adequately addressed.

Example

Prompt:

Explain photosynthesis and include sunlight, water, carbon dioxide, glucose, and oxygen.

If the response explains photosynthesis but doesn't mention several requested components, the completeness score should decrease.

5. Criterion 3 — Clarity

Definition

Measures how easy the response is to understand.

Consider:

- Organization
- Sentence structure
- Vocabulary
- Logical flow
- Readability
- Explanation quality

Scoring Guide

Score	Description
1	Very difficult to understand or poorly organized.
2	Frequently unclear or confusing.
3	Generally understandable but contains some unclear sections.
4	Clear, organized, and easy to understand.

- 5 Exceptionally clear, concise, logically organized, and easy to understand.
-

6. Criterion 4 — Instruction Following

Definition

Measures whether the AI followed the **specific instructions contained in the prompt**.

Consider requirements such as:

- Word limits
- Number of items
- Requested format
- Audience
- Tone
- Structure
- Required information
- Restrictions

Scoring Guide

Score	Description
1	Almost none of the instructions were followed.
2	Several important instructions were ignored.
3	Some instructions were followed, but important requirements were missed.
4	Most instructions were followed correctly.

5 All major instructions were followed correctly.

Example

Prompt:

Give five study tips in a numbered list.

If the AI gives five tips but uses paragraphs instead of a numbered list, the response should lose points for instruction following.

7. Criterion 5 — Specificity

Definition

Measures whether the response provides an appropriate level of detail and directly addresses the specific requirements of the task.

A specific response should avoid vague statements and provide useful details, examples, or explanations where appropriate.

Scoring Guide

Score	Description
1	Extremely vague and provides little useful information.
2	Mostly general with limited useful detail.
3	Provides reasonable detail but could be more specific.
4	Provides useful and task-appropriate detail.

- 5** Highly specific, precise, and well-targeted to the prompt.
-
